EXPERIENCE

Product Manager | Arcadia (formerly ENGIE Impact)
March 2025 – Present • Boston, MA

- Leading the migration of ENGIE Impact's manual tariff optimization service (~500k accounts, ~200 clients, ~14M/yr in customer savings) into Arcadia's automated optimization pipeline by designing new workflows and reconciling processes.
- Used SQL across legacy ENGIE Impact and Arcadia data sources to identify and validate active sites and cross-check account data the migration depends on, so project decisions rested on verified numbers rather than inherited reports.
- Replaced a 12-year-old legacy stack (.NET desktop app, SOAP service, Access DB) with a cloud-native solution as a sole PM on a 4-engineer team, cutting monthly upload time by 97% and scaling capacity 10x to 600,000 sites.
- Shipped the first product bridging Arcadia and ENGIE Impact systems post-acquisition, pairing ENGIE's contract database with Arcadia's rate engine. It collapses an 8-hour, 21-tab Excel process into a 15-minute workflow (~12,000 analyst-hours/yr, $720k targeted in operating cost) and won CPO greenlight to production.

Product Designer | ENGIE Impact
Sep 2024 – March 2025 • Boston, MA

- Designed responsive web experiences for Fortune 500 companies to track carbon emissions, generate compliance reports, and set reduction targets across millions of energy data points.
- Shadowed analysts end-to-end and built a full-service blueprint of their 6-phase workflow, surfacing pain points that defined the modernization roadmap; ran a scenario workshop that turned three solution paths into a two-phase release plan.
- Established UI patterns, flows, and standards as the only designer on an engineering-led internal platform with no existing design system and contributed to the Ellipse Fluid Design System.
- Designed standardized site onboarding replacing ~50 client-specific Excel templates and a 3-step review flow that eliminated the duplicate EPA submissions plaguing the legacy tool.

Product Design Intern | ZTE Corporation
Feb 2023 – Aug 2023 • Shanghai, China

- Designed AndroidOS experiences and defined future feature enhancements for nubia gaming smartphones.
- Utilized generative AI (Midjourney) to create models, backgrounds, and brainstorm advertisement ideas for the branding director of Africa and Europe.

UX Designer | Planetflip
Jun 2022 – Sep 2022 • La Jolla, CA

- Overhauled Planetflip, a climate change focused app promoting mass community action targeting Gen Z.
- Increased user engagement and community-building through the integration of gamification features.

EDUCATION

Master of Human-Computer Interaction | Carnegie Mellon University

- *Aug 2023 – Aug 2024 • Pittsburgh, PA*

B.S. Cognitive Science, Design & Interaction; Business Minor | University of California, San Diego

- *Sep 2019 – Dec 2022 • La Jolla, CA*

NOTABLE PROJECTS

Product Designer | Honda Research Institute
Jan 2024 – Aug 2024 • Pittsburgh, PA

- Built an LLM-powered internal research assistant designed for Honda researchers to conduct frequent, high-quality field tests to increase accuracy of frontier research in autonomous driving domains.

Product Designer | Bosch
Jan 2024 – Apr 2024 • Pittsburgh, PA

- Led the design of a home robot concept for the elderly, conducting customer discovery through market research, surveys, and interviews to develop practical solutions for the aging population.

SKILLS & TOOLS

Skills: AI-assisted development, Feature requirements, Agile methodologies, Product development, Design systems, Rapid prototyping, Service design, Project management, UX research, competitive analysis

Tools: Claude Code, Cursor, Figma, Jira, Python, SQL, Git, Lovable, Adobe Suite, HTML/CSS/JS, Notion
